

Typo Effect Analysis

Model: Llama-3-8B-AWQ-4bit-local

Strategy: Direct Completion

Max New Tokens: 25

Temperature: 0.1

Radar Plot of Accuracy

Radar Plot of Accuracy

Accuracy = (Number of correct predictions) / (Total number of predictions)

Grouped Bar Plots of Accuracy

Accuracy = (Number of correct predictions) / (Total number of predictions)

Aggregated Bar Plot of Accuracy

Accuracy = (Number of correct predictions) / (Total number of predictions)

All Perturbations Bar Plot of Accuracy

Accuracy = (Number of correct predictions) / (Total number of predictions)

Radar Plot of AUCPR_sample

AUCPR (Area Under the Precision-Recall Curve) = $\int P(R) dR$

where P is Precision and R is Recall

Grouped Bar Plots of AUCPR_sample

AUCPR (Area Under the Precision-Recall Curve) = $\int P(R) dR$

where P is Precision and R is Recall

Aggregated Bar Plot of AUCPR_sample

AUCPR (Area Under the Precision-Recall Curve) = $\int P(R) dR$

where P is Precision and R is Recall

All Perturbations Bar Plot of AUCPR_sample

AUCPR (Area Under the Precision-Recall Curve) = $\int P(R) dR$

where P is Precision and R is Recall

Radar Plot of AUCPR_adj

AUCPR_adj is calculated similarly to AUCPR_sample, but using adjusted probabilities

Grouped Bar Plots of AUCPR_adj

AUCPR_adj is calculated similarly to AUCPR_sample, but using adjusted probabilities

Aggregated Bar Plot of AUCPR_adj

Aggregated Bar Plot of AUCPR_adj by Intensity

AUCPR_adj is calculated similarly to AUCPR_sample, but using adjusted probabilities

All Perturbations Bar Plot of AUCPR_adj

AUCPR_adj is calculated similarly to AUCPR_sample, but using adjusted probabilities

Radar Plot of Entropy_sample

Entropy = - p_i * log(p_i)

where p_i is the probability of each possible outcome

Grouped Bar Plots of Entropy_sample

Entropy = - p_i * log(p_i)

where p_i is the probability of each possible outcome

Aggregated Bar Plot of Entropy_sample

Entropy = - p_i * log(p_i)

where p_i is the probability of each possible outcome

All Perturbations Bar Plot of Entropy_sample

Entropy = - p_i * log(p_i)

where p_i is the probability of each possible outcome

Radar Plot of Entropy_adj

Entropy_adj is calculated similarly to Entropy_sample, but using adjusted probabilities

Grouped Bar Plots of Entropy_adj

Entropy_adj is calculated similarly to Entropy_sample, but using adjusted probabilities

Aggregated Bar Plot of Entropy_adj

Aggregated Bar Plot of Entropy_adj by Intensity

Entropy_adj is calculated similarly to Entropy_sample, but using adjusted probabilities

All Perturbations Bar Plot of Entropy_adj

Entropy_adj is calculated similarly to Entropy_sample, but using adjusted probabilities
